

The Meadow Grass Pack includes seven templates for Forester Pro of grasses. Forester Pro templates are used to generate randomized models. The models included in this pack **require Forester Pro version 1.19** and can be used with the free version. These models provide simple meshes designed to give greater volume than simple billboards. As meshes their performance and appearance will depend on current light settings and shaders.

Installing the Tree Pack

The downloadable Tree Packs are self installing. Simply run the installer as administrator (right click the executable and select **run as administrator**). The installer will add the Tree Pack models directly to Forester Pro's tree library. To install the Tree Pack please ensure you are using Forester v1.03 or above. A patch to upgrade your version of Forester Pro is available on our website (<http://www.hptware.co.uk/downloads>).

Grass Templates

Each grass template includes textures and meshes to generate tufts of different types of common meadow grasses. Two alternative materials are provided for each template, a green meadow grass and a pale yellow dry grass. The meadow grass pack provides models useful for temperate and tropical/arid scenes. The seven templates are shown below.
